Professional Summary

Senior Full Stack Software Engineer with 10+ years of experience architecting highly scalable distributed systems, decoupling monolithic architectures, and driving multi-quarter technical initiatives. Proven track record of operating at an enterprise scale: reducing infrastructure costs, achieving 30x throughput performance gains, and engineering privacy-first AI/LLM pipelines. Zoom Security Champion Plus driving org-wide operational excellence, AI-enhanced developer productivity, and zero-downtime deployment strategies.

Technical Skills

Architecture & Cloud: Distributed Systems, Microservices, Monolith-to-Microservices Decoupling, Blue-Green Deployments, CI/CD, Threat Modeling
AI & Data Pipelines: LLM Routing, Semantic Caching, SSE Streaming, AI Observability, PII Redaction, Kafka
Backend Technologies: Java, Spring Boot, Node.js, Ruby on Rails, Python, C++
Databases & Storage: MySQL, PostgreSQL, Redis, ElasticSearch, ZFS, Data Archival Strategies
Frontend & Web: Next.js, React, EmberJS, HTML, CSS, RESTful API Design

Professional Experience

Senior Software Engineer | Zoom

06/2022 - Present

- Spearheading the architectural decoupling to replace a third-party Quality Management tool with Zoom's in-house QM solution. Architected its privacy-first AI pipeline, implementing dynamic PII redaction and intelligent LLM routing to optimize API costs across tiered models.
- Engineered a high-performance LLM execution layer featuring Server-Sent Events (SSE) for real-time token streaming and semantic caching to reduce redundant API calls. Established comprehensive AI observability dashboards to monitor guardrails, token usage, and model telemetry.
- Directed cross-squad coordination with the Zoom Contact Center (ZCC) team to build multiple core features, directly unblocking critical onboarding for major enterprise clients, including Oracle.
- Architected a Hot-Warm-Cold data-archival strategy and redesigned core database tables, collaboratively resolving 15+ complex queries, slashing DB CPU utilization by 70%, and driving significant DB instance cost savings.
- Engineered a 30x processing speedup for user events by resolving critical throughput bottlenecks, reducing the processing latency of 30,000 events from 150 minutes to under 5 minutes.
- Championed an AI-enhanced development workflow across the engineering team using AI coding tools, establishing standards that reduced end-to-end feature delivery time by 70% with a near-zero defect rate.
- Pioneered the adoption of Blue-Green Deployments across teams, acting as Release Owner to ensure zero-downtime releases, mitigate risks, and upskill peers on modern CI/CD methodologies.
- Attained "Security Champion Plus" status, enforcing org-wide security and data-classification standards for the data-governance portal, conducting threat modeling, and mentoring engineers on secure system design.
- Led the foundational architecture of Java Spring Boot and Node.js microservices, engineering a complex reverse-proxy authentication system that scaled to deliver 21 enterprise integrations (including ServiceNow and Zendesk) and significantly accelerated new integration development cycles through reusable design strategies.

Fullstack Senior Software Developer | Freshworks

11/2020 - 05/2022

- Served as Squad Lead and Scrum Master, driving technical roadmaps and collaborating directly with Product Management to architect highly scalable web solutions using Ruby on Rails and EmberJS.
- Proactively analyzed system defect trends to triage and debug technical support requests, identifying systemic bottlenecks and optimizing affected areas to permanently minimize support ticket influx.
- Mentored junior engineers through pair programming and code reviews, maintaining clean code standards (TDD) and managing task delegation for optimal execution.

Fullstack Software Developer | Freshworks

06/2018 - 10/2020

- Spearheaded the backend implementation of essential Core CRM functionalities within the Freshsales product, pioneering highly-available email-related integration features.
- Revamped and optimized legacy Import/Migration tools, significantly improving performance benchmarks for data ingestion.
- Played a pivotal role in the architectural integration of Segment within the Freshsales ecosystem, enhancing cross-platform data insights.

Member Technical Staff | Zoho Corporation

05/2016 - 05/2018

- Engineered scalable REST APIs for robust integration across accounting, invoicing, and taxation modules.
- Played a substantial backend role in the successful development and enterprise launch of Zoho's GST returns filing platform.
- Optimized complex MySQL queries to reduce latency and developed seamless platform integrations between Zoho Books and AvaTax.

Leadership & Recognition

Recognition: Awarded Q3 Top Performer in the Zoom WFM team for driving org-wide application scalability, Cube monitors, Pod Scaling, and DB optimization.
Initiatives: Creator & Host of "Technical Thursdays," an engineering knowledge-sharing forum focusing on Performance, AsyncMQ, and Node Architecture.

Education

Bachelor of Technology in Computer Science Engineering
College of Engineering, Chengannur | 2012 - 2016
